

The website is built. Every page exists and works. What's missing is the real information to put in it — right now a lot of the text on the page is a note-to-self in a yellow box, waiting on an answer. That's what this is. **No deadline, and no need to go in order.** Skip anything you don't know or don't want on the site — "I don't know" and "leave that off" are both real answers. A few questions are marked **IMPORTANT** — those are the ones where a guess could cause an actual problem, so they're worth a careful answer rather than a quick one.

IF NOTHING ELSE GETS ANSWERED, THESE FIVE MOVE THE MOST

1. Which helicopters is the shop rated on, and what work on each?
2. What year was the company founded?
3. Can the NASA work be described in writing?
4. Can Bell send their seal artwork and written permission?
5. Can we spend an afternoon at the hangar taking photos?

1 THE BASICS

What year was the company founded?

We have "1997 or so," which isn't enough to print.

Is there a tagline, or a line the company already uses to describe itself?

This sits under the logo at the bottom of every page. Something like "Helicopter maintenance you can count on." If nothing exists, that's fine — we'll write some options.

In one or two sentences, what is South Air Helicopters?

Written the way you'd say it to someone who asked at a party.

Is there a mission statement, or something the company is committed to?

2 AIRCRAFT AND WHAT YOU WORK ON

IMPORTANT Which helicopter models is the shop rated to work on?

Naming a model the shop isn't rated for is something a customer could act on and make a maintenance decision from. So the page stays empty until this list is confirmed. Please list only what's actually on the certificate.

IMPORTANT For each model, what work is authorized?

Inspections, airframe, engine, avionics, component work — whatever applies. It can differ by model.

Is the shop Bell-focused, or does it work across manufacturers?

This changes how the whole page is framed.

3 CERTIFICATIONS

IMPORTANT Can Bell provide their seal artwork and written permission to use it?

Bell's mark can't go on the site until Bell sends the artwork and says in writing it's okay. There's an empty space on the page reserved for it. This comes from the Bell account rep rather than the ethics hotline.

What does being a Bell Customer Service Facility actually authorize the shop to do?

Does it cover warranty work? What can this shop do that a shop without the designation can't?

Is "Bell Helicopter Customer Service Facility" still the current term?

That wording came off the business card. Bell dropped "Helicopter" from the name in 2018, so the site may be using a retired term.

How long has the shop held the Bell designation, and what's required to keep it?

Recurring audits, factory training, specific tooling?

IMPORTANT What ratings are on FAA Repair Station certificate #XRIR622K, and are there any limitations?

Airframe, powerplant, radio, instrument, accessory — and which classes. This is printed on the certificate itself, so a photo or copy of it would answer this completely.

Does the shop hold any other certifications or authorizations?

Anything else worth listing at the bottom of the site.

4 NASA

IMPORTANT What exactly does South Air Helicopters do in connection with NASA?

This needs to be specific and factual — for example, "provides helicopter maintenance under contract to [specific program]." What it can't do is suggest NASA endorses or partners with the company, because NASA has firm rules about vendors using their name that way.

IMPORTANT Which NASA center, facility, or program?

What year did the NASA work start, and how did it come about?

IMPORTANT How much of this is okay to say publicly?

If any of it is under contract terms that limit what can be advertised, we need to know before the page goes up. Also: does NASA need to review anything that mentions them?

The site currently describes this as a "partnership." Is that accurate, and is it how you want it described?

5 SERVICES AND QUOTING

Is this list of services right?

Currently on the site: Scheduled Maintenance · Airframe & Engine Repair · Avionics & Systems · Pre-Purchase & Annual Inspections · Ground Support & Logistics · Parts & Fleet Support. These were starting guesses, not a confirmed list. Cross off what doesn't apply, add what's missing.

For each service that stays, what's actually included?

A sentence or two each is plenty.

Does the shop do charter or flight support at all, or is it maintenance only?

The homepage currently lists it. If it's not something you do, it comes off.

What do you need from a customer to put a quote together?

Make and model, serial number, total hours, logbook status, description of the work?

How does a quote come back to them — a phone call, an emailed estimate, a written scope of work?

IMPORTANT **How long does a quote usually take?**

Only worth publishing if it's a number you're comfortable being held to. Leaving it off is a fine answer.

Should quote requests come in by phone, through a form on the site, or both?

This decides whether the contact form is worth wiring up at all.

Is there a customer who'd give a short quote about working with you?

Or a line from ownership about how the shop approaches its work.

6 THE COMPANY STORY

Who founded the company, and why?

What did the earliest days look like?

What are two or three milestones worth marking, and roughly when?

First major contract, a hangar expansion, a new certification — whatever actually mattered.

How much should the recent change in ownership be public?

It's on the timeline right now. It can stay, be softened, or come off entirely.

Is there a longer version of the founding story?

The kind of detail that comes from actually being there. Specific memories beat general description here — this is the part of the site competitors can't copy.

7 PEOPLE

A short bio for the President.

A few sentences: background, how long with the company, how they got into helicopters. A photo as well, if there's one you like.

Should anyone else appear on the site?

There are two open spots on the team page. They can be filled, or removed so it's just the one.

The site currently lists three company values: Safety First, Reliability, Precision. Are those the right three?

These were chosen as a starting point, not by you. Swap or rewrite freely.

For each value that stays, what does it look like in practice?

8 HIRING

Are there any open positions right now?

If there aren't, that's genuinely fine — the page will say so plainly. An honest "nothing at the moment, but we're always glad to hear from good mechanics" reads much better than an empty page.

For any open role: what certificates are required, how much experience, full or part time, what shift?

Is Bell experience required, or just preferred?

What does a mechanic here actually do day to day?

How many people work at the shop, and what's it like to work there?

This is the thing bigger competitors can't offer — worth being specific.

What's offered — health insurance, PTO, retirement, training or certification support, tool allowance?

Only what actually exists.

Should resumes go to a separate email address than general inquiries?

Is there an equal opportunity employer statement you use?

A careers page should have one. If there's existing wording, we'll use it exactly.

9 PRACTICAL DETAILS

What are the business hours?

What's the airport identifier and the coordinates?

Pilots and operators look for this first, and both competitors list it at the top of their contact page. It should come off the FAA airport record rather than a guess.

Which email address should be the public one?

Right now the contact page lists two, and one of them is a personal AT&T address shown with a name and title. Worth deciding what you actually want on a public page.

10 PHOTOGRAPHS

Almost every page has a space reserved for a photo. Most of these could be covered in one afternoon at the hangar with a decent phone camera:

- The hangar, from outside and inside
- The shop floor mid-work, and aircraft being worked on
- The team, or a few people working
- A portrait of the President
- The repair station certificate on the wall
- Anything historical — the original hangar, an early team photo, a first aircraft

Is there an existing set of photos, or should we plan a visit?

IMPORTANT For any NASA-related photo: are we clear to publish it?

Photo usage rights need checking before anything NASA-related goes up. And nothing showing Bell branding until Bell gives permission.

11 NEWS AND STORIES

Is there anything worth posting as news?

A new certification, a hangar expansion, a project finishing, a community event. Three examples would fill the page. If there's nothing right now, the page can wait — an empty news page is worse than no news page.

12 TWO THINGS ON THE SITE THAT NEED CHECKING

The homepage currently shows two claims that were written as placeholder text and were never verified.

IMPORTANT "100% Safety-First Culture" — true, and do you want it on the site?

IMPORTANT "24/7 Support Availability" — is the shop actually reachable around the clock?

If it's business hours only, this comes off. It's the kind of claim someone could call at 2am expecting.

13 ANYTHING ELSE

Anything that should be on the site, or anything on it that shouldn't be?
